

## Journal of TOXICOLOGIC PATHOLOGY

http://www.japantoxpath.org/en/publication/jtp/

Vol. 35 No. 4 Autumn 2022

## Published by The Japanese Society of Toxicologic Pathology

The Journal of Toxicologic Pathology has been selected for coverage in Thomson Reuters products and services. Beginning with volume 21, number 1, year 2008, the journal is indexed and abstracted in:

- ◆ Science Citation Index Expanded (also known as SciSearch®)
- ◆ Journal Citation Reports/Science Edition
- ◆ Biological Abstracts
- ♦ BIOSIS Previews

## Description

The Journal of Toxicologic Pathology is an official periodical journal of the Japanese Society of Toxicologic Pathology. The journal accepts original papers, short communications, case reports and review articles. One volume published each year is composed of four numbers. Members of the Society are entitled to receive all publications in exchange for his or her membership fee. All articles published in the Journal of Toxicologic Pathology represent the opinion(s) of the authors(s) and should not be construed to reflect the opinion of the Society.

The Journal of Toxicologic Pathology has been selected for coverage in Thomson Reuters products and services. Beginning with volume 21, number 1, year 2008, the journal is indexed and abstracted in:

- ◆ Science Citation Index Expanded (also known as SciSearch®)
- ◆ Journal Citation Reports/Science Edition
- ♦ Biological Abstracts
- ♦ BIOSIS Previews

Cover: A: Stereomicroscopic image of organoids derived from KS cells on day 20 in the 24-well transwell insert. B1: Histology of organoids from KS cells on day 20. The cells were mostly necrotic at the center of the culture (arrow). Haematoxylin and eosin (HE) stained; bar=600 μm. B2, B3: Magnified images of B1. The tubular structures of the organoids were generally lined with a single layer of cells. The tip of the tubular structure was bulged, and small cell populations were often trapped within the tubular structure. HE stained sec-tions; bar=150 μm. C1: Electron microscopic image of organoids derived from KS cells on day 20; bar=5.0 μm. Magnified images of the luminal side (C2) and outer side (C3) of the tubular structure; bar=1.25 μm. (See S. Ueno, p 333–343)
